PROFILE

Product-minded engineer with deep experience across UX, software delivery and customer discovery. Product sense built across consumer generative AI and regulated financial workflows. Equally comfortable working through designs and talking with customers. Owns outcomes from discovery through delivery, using AI to work out what to build, not just to build faster.

EXPERIENCE

Solutions Engineer

Jul 2024 – Present

HERE

Technical partner to enterprise customers, working across discovery, product shaping, pre-sales, solution design and hands-on delivery for the HERE Enterprise Browser, a SaaS platform for secure enterprise workflows.

- Architect and engineer solutions with Australian financial institutions, uncovering workflow problems, shaping implementations and supporting deployments at scales up to 80,000 users
- Translate customer friction into product opportunities, prototypes and roadmap input, working across UX, APIs, integrations and platform architecture
- Use AI and coding agents daily for research, technical analysis, rapid prototyping and delivery, while validating outputs against product and technical requirements

Senior Software Engineer

Jan 2024 – Jul 2024

Leonardo.Ai

Product engineering at Australia's fastest-growing AI startup, building consumer generative-AI products at scale in the lead-up to acquisition by Canva.

- Led development of the flagship Image Generation V2, the core creation interface for a platform serving 19 million users, alongside other high-traffic features such as the Universal Upscaler
- Partnered closely with product and design on interaction design and UI quality, obsessing over states, transitions, spacing and usability across high-traffic consumer AI experiences
- Built highly interactive product experiences in Next.js, React, XState and GraphQL against rapidly evolving AI model infrastructure

Head of UX

Jan 2022 – Sep 2023

Yieldbroker

Owned product discovery, UX and interaction design for the complete rebuild of a fixed-income trading platform underpinning the Australian financial industry.

- Led customer research, workflow analysis and rapid prototyping to uncover problems and shape product direction
- Worked directly with traders and business stakeholders to redesign critical workflows, balancing usability, domain complexity and commercial needs
- Owned interaction design from early concepts through high-fidelity Figma and design-system foundations, setting the quality bar for the rebuilt platform
- Influenced C-suite decisions on product operating model and organisational design, moving the business toward a more agile, product-led approach

Tech Lead / Eng. Manager **Yieldbroker**

Jan 2020 – Jan 2022

Led front-end product delivery and the ground-up modernisation of Yieldbroker's legacy trading platform.

- Owned the initial application architecture, monorepo and CI/CD pipeline, creating the foundation for incremental replacement of the legacy system
- Led development of the real-time trading interface using Angular, TypeScript, RxJS and WebSockets
- Built and shipped products across the platform, including a Smart Desktop PWA, an internal market-operations platform and a rebuilt public website
- Managed, hired and mentored the UI engineering team while setting standards for architecture, code quality and delivery

Senior Software Engineer **Lab49**

Mar 2010 – Dec 2019

Built complex financial products for regulated institutions across Australia, the United Kingdom and the United States, specialising in trading workflows, streaming data and mission-critical interfaces.

- Worked directly with traders, analysts and business stakeholders to understand specialised workflows and translate them into effective digital products
- Led engineering delivery across institutional onboarding, fixed-income and FX trading, commodities digitisation, regulatory tracing and financial scenario modelling
- Delivered products for organisations including UBS, Morgan Stanley, Commonwealth Bank and NAB in demanding regulatory, security and performance environments

Earlier roles

Early career across startups, agencies and consulting, building consumer products, digital platforms, and interactive applications for global brands including Adobe and projects for the World Economic Forum and Financial Times.

CORE SKILLS

Product Discovery

Customer discovery, stakeholder interviews, workflow analysis, prioritisation, rapid prototyping, analytics

AI & Automation

Agentic workflows, prompt and skill design, evals, AI-assisted research and synthesis, rapid prototyping, Vercel AI SDK & Eve, Claude, Codex, n8n, RAG

Software Engineering

TypeScript, React, Next.js, Node.js, React Native, API design, auth, cloud hosting, scalable front-end systems and real-time applications, responsive web and PWAs

Design

UX design, interaction design, design systems, prototyping, Figma

SIDE PROJECTS

Household system

AI assistant for meal planning, shared lists, financial tracking and calendar coordination, used daily by the family. Built with agentic workflows using Vercel AI SDK, Convex and Clerk

Personal health coach

Agent-based system for reasoning across personal health data, tracking interventions and surfacing insights. Vercel AI SDK, Inngest, Supabase.

Class booking platform

Designed, built and operate a live marketing, booking and payments platform for a yoga business. Next.js, Postgres, Payload CMS, Square payments.

EDUCATION

Degree

Bachelor of Information Technology

Minor in Marketing
