PROFILE

Product builder working at the intersection of engineering, design, and product. Product sense and taste built across financial trading and consumer generative AI. Just as comfortable in the code as in the designs, or in front of a customer. At the forefront of rapid AI prototyping and AI-accelerated engineering.

EXPERIENCE

Solutions Engineer

Jul 2024 – Present

HERE

Technical partner to enterprise customers, working across discovery, product shaping, solution design and hands-on delivery for the HERE Enterprise Browser across Asia-Pacific.

- Forward-deployed inside Australian institutional banks and brokers to architect, design, build and ship next-generation desktop platforms hosting the applications their staff use daily, spanning institutional transaction management and fixed-income trading, at scales up to 80,000 users
- Translating customer workflow friction into product improvements, UX opportunities and roadmap influence
- Leveraging AI daily to serve customers faster, answering technical questions accurately, sharpening customer intelligence to advance deals, and iterating quickly on prototypes and proofs-of-concept

Senior Software Engineer

Jan 2024 – Jul 2024

Leonardo.Ai

Product engineering at Australia's fastest-growing AI startup, building consumer generative-AI products at scale in the lead-up to acquisition by Canva.

- Led development of the flagship Image Generation V2, the core creation interface for a platform serving 19 million users, alongside other high traffic features such as the Universal Upscaler
- Worked with product on activation and monetisation trade-offs in Image Generation V2, shaping where the free experience ended and paid features began
- Built highly interactive product experiences in Next.js, React, XState and GraphQL against rapidly evolving AI model infrastructure

Head of UX

Jan 2022 – Sep 2023

Yieldbroker

Owned product discovery, UX and interaction design for the complete rebuild of a fixed-income trading platform underpinning the Australian financial industry.

- Introduced product discovery practices including customer research, workflow analysis, stakeholder interviews, and rapid prototyping
- Worked directly with traders and business stakeholders to redesign critical workflows and improve trading experience
- Led interaction design from rapid prototypes through high-fidelity Figma designs and design-system foundations
- Influenced C-suite decisions on organisational design and agility, partnering with the CTO to move the business towards an agile product operating model

Tech Lead / Eng. Manager **Yieldbroker**

Jan 2020 – Jan 2022

Led front-end product delivery and the ground-up modernisation of Yieldbroker's legacy trading platform.

- Owned the initial application architecture, monorepo and CI/CD pipeline, creating the foundation for incremental replacement of the legacy system
- Led development of the real-time trading interface using Angular, TypeScript, RxJS and WebSockets
- Built and shipped products across the platform, including a Smart Desktop PWA, an internal market-operations platform and a rebuilt public website
- Managed, hired and mentored the UI engineering team while setting standards for architecture, code quality and delivery

Senior Software Engineer **Lab49**

Mar 2010 – Dec 2019

Built complex financial products for regulated institutions across Australia, the United Kingdom and the United States, specialising in trading workflows, streaming data and mission-critical interfaces.

- Worked directly with traders, analysts and business stakeholders to understand specialised workflows and translate them into effective digital products
- Led engineering delivery across institutional onboarding, fixed-income and FX trading, commodities digitisation, regulatory tracing and financial scenario modelling
- Delivered products for organisations including UBS, Morgan Stanley, Commonwealth Bank and NAB in demanding regulatory, security and performance environments

Earlier roles

Early career across startups, agencies and consulting, building consumer products, digital platforms, and interactive applications for global brands including Adobe and projects for the World Economic Forum and Financial Times.

CORE SKILLS

Product Discovery

Stakeholder interviews, customer discovery, workshop facilitation, journey mapping, rapid prototyping, prioritisation, experimentation, analytics, success metrics

Software Engineering

TypeScript, React, Next.js, Node.js, API design, Auth, cloud hosting, scalable front-end systems and real-time applications, responsive web and PWAs

AI engineering

Evals, Vercel AI SDK, Claude Code/Cowork, Codex, n8n, RAG

Design

UX design, interaction design, design systems, prototyping, Figma, Pencil, Lovable, Claude Design

Enterprise & Delivery

Enterprise stakeholder management, solution architecture, executive communication, authentication systems, proofs-of-concept

Domain

Regulated financial services, fixed-income and FX trading, institutional onboarding, market operations, risk and compliance constraints

EDUCATION

Degree

Bachelor of Information Technology

Minor in Marketing

University of Canberra
